

# STEPS FOR PLANTING SEEDLINGS

Take a biodegradable pots and make sure your pots have holes for proper drainage.

Look for a soil that is made especially for starting seeds. Soil should be damp but not wet.

Select your seeds and sow one or two seeds by gently press in the seeds in the pot, or lightly cover them with a soil.

65° to 75° is ideal temperature for germination. Most plants grow well in sunlight but avoid too hot or too cold place.

Mist the seeded pots daily but avoid watering during germination.

With a biodegradable peat pot, you eliminate the risk of transplant stress, as you're planting the entire pot into ground or larger pots
